

Coolroom and Freezer Shelving

Coolroom and Freezer Shelving designed for storing all products

The Coolroom and Freezer Shelving system is ideal for food and beverage storage rooms. The storage units are suited to cold storage, restaurant kitchens, supermarkets, liquor stores, cafes, and other businesses that store foodstuffs for human consumption.

The sturdy, boltless shelving system provides a versatile system maximising all areas of your space with the ability to be configured into many different designs and shelving requirements. You can use all corners and heights within your dedicated space for this hand-loading shelving solution.

The shelving system is available in various finishes, including mesh, flat steel and plastic, and can be quickly removed for easy cleaning. The system is ideal for retaining airflow around products.

It is the optimum product for storing dry products or items stored in boxes or are well sealed. Shelving design can include specific areas where the likelihood of spillage containment of liquid products may occur.

The frames are made of galvanised steel, ensuring the shelving system's durability and protection against corrosion. The shelving is provided in a range of different grades. Food grade plastic perforated shelf panels are available in 4 depths from 320mm to 600mm deep. Plastic shelf panels are stocked in blue for above 0°C use, and green shelves for subzero use (using specially formulated plastic to resist embrittlement in freezer environments).

You have the convenience of changing the shelving configuration with just a clip in approach, providing you with the flexibility to change spacing as your stock requirements fluctuate or new SKUs arrive.

Bowen Stockroom Solutions brings 30 years of experience in the shelving storage industry. We provide you with a coolroom and freezer shelving system that has undergone rigorous testing, and you are installing the very best quality available. The shelving holds up to 200kgs per shelf level. We provide a ten-year manufacturer's warranty. It's designed to last a lifetime.

Fast Facts:

- Easy to assemble, simply clicks together, and no tools are required;
- Galvanised 3.1 certified high tensile structural steels in accordance with the EN10204 standards Shelving lengths;
- Maximises your storage capacity with special units used to form L shapes and U shapes to utilise all available space;
- Proven design and performance for coolroom shelving;
- Fire & corrosion resistant – ideal for everyday use;
- Wide ranges of sizes – suitable for any business;
- Complies with Australian standards;
- 10 Year Warranty.

This is the most versatile boltless Stockroom Shelving system with the greatest number of bay widths, lengths and heights compared to any other storage shelving system on the market.

A stockroom shelving system was developed to resolve challenges associated with storing light goods in both standard applications and two-tier configurations with heights ranging up to 5 metres.

It is a highly technical product that excels due to its speed of assembly, stability, and performance/cost ratio. Completely boltless, interchangeable, and extendable, a versatile stockroom shelving system satisfying the broadest needs of light storage requirements.

Constructed in galvanised 3.1 certified high tensile structural steel in accordance with the EN10204 standards ensuring the product's durability.

The frame system is composed of uprights, diagonal and horizontal spacer bars in varying depths and heights with load-bearing capacities ranging up to 3600 kg/frame.

With the steel strength, suspended walkway installations can be created with all the protection and safety elements required by current standards.

The standard shelving sizes that we hold in stock are:

- Heights – 1972mm, 2500mm, 3028mm, 3424mm;
- Depths – 320mm, 400mm, 500mm, 600mm, 700mm, 800mm;
- Lengths – 600mm, 900mm, 1080mm, 1200mm, 1350mm, 1500mm, 1650mm, 1800mm.

Fast Facts:

- Boltless shelving system;
- 33mm upright pitch;
- Excellent load-bearing capacity performance;
- Load capacity of up to 200kg per level;
- High-tech design;
- 90° corner units maximise storage
- Galvanised steel ensures durability over time
- Modular system available in many different dimensions;
- CE marked structural components.
