

# High Rise Shelving

## Put your Vertical Space to Work with High Rise Shelving

Multi-level storage is the ultimate solution for any stockroom or large space with a high ceiling to utilise all available storage space. The high rise shelving solution is designed to be constructed to meet different heights; this can be two or three times the usual shelving heights. The shelving is extensively used in suspended walkway systems.

It is structurally sound with CE marked galvanised steel, the highest rating of shelving available. The interlocking system provides the strength and robustness to support stock weighing up to 200 kgs per shelf on all shelving levels.

High rise shelving utilises Narrow and Very Narrow Aisles (VNA) and is generally serviced by stock pickers or team members. These units operate in aisles not much wider than the load itself and allow people to move through the aisles to collect items easily. In addition, the minimised aisle widths increase net area utilisation within the building.

There are usually significant savings in floor space, maximising the inventory levels in the stockroom or storage areas. In addition, high rise shelving offers a greater capacity in a limited space without losing the advantages of having direct access to any shelf.

We can assist you in designing the most economical option that suits the way your business operates, whether it's a catwalk installed between high rise shelving, a free-standing mezzanine or a shelf-supported mezzanine. There is virtually no limit to how efficiently you can use your untapped vertical space!

The higher storage levels can be accessed with a rolling ladder or from a mezzanine access area via staircases. The construction of high rise shelving is ideal for lower throughput stock with capability for bulk capacity.

Theoretically, the shelving components are constructed as long span shelving to provide an excellent storage solution. This system offers the best combination of space usage & unrestricted access to stock.

#### Fast Facts:

- Up to 5000mm height options available for shelving;
- CE marked structural components;
- Galvanised 3.1 certified high tensile structural steels in accordance with the EN10204 standards Shelving lengths;
- Shelving height adjustment of 33mm increments;
- All optional components, such as dividers, drawers, and hanging rails, can be used;
- 10 Year Warranty.

This is the most versatile boltless Stockroom Shelving system with the greatest number of bay widths, lengths and heights compared to any other storage shelving system on the market.

A stockroom shelving system was developed to resolve challenges associated with storing light goods in both standard applications and two-tier configurations with heights ranging up to 5 metres.

It is a highly technical product that excels due to its speed of assembly, stability, and performance/cost ratio. Completely boltless, interchangeable, and extendable, a versatile stockroom shelving system satisfying the broadest needs of light storage requirements.

Constructed in galvanised 3.1 certified high tensile structural steel in accordance with the EN10204 standards ensuring the product's durability.

The frame system is composed of uprights, diagonal and horizontal spacer bars in varying depths and heights with load-bearing capacities ranging up to 3600 kg/frame.

With the steel strength, suspended walkway installations can be created with all the protection and safety elements required by current standards.

#### The standard shelving sizes that we hold in stock are:

- Heights – 1972mm, 2500mm, 3028mm, 3424mm;
- Depths – 320mm, 400mm, 500mm, 600mm, 700mm, 800mm;
- Lengths – 600mm, 900mm, 1080mm, 1200mm, 1350mm, 1500mm, 1650mm, 1800mm.

#### Fast Facts:

- Boltless shelving system;
- 33mm upright pitch;
- Excellent load-bearing capacity performance;
- Load capacity of up to 200kg per level;
- High-tech design;
- 90° corner units maximise storage
- Galvanised steel ensures durability over time
- Modular system available in many different dimensions;
- CE marked structural components.
