

Pigeonhole Shelving

Pigeonhole shelving for organised stock management.

Staying organised and holding sufficient stock within retail stockrooms and general storage areas can be a challenge. Typically working with limited space, stock items, or SKU's can be going out as fast as they come in. It can also be difficult for team members to find items quickly when serving customers. Pigeonhole shelving is one of the best methods of organising garment stock.

For garment stock, the ability to segment SKUs in size and colour to be easily accessible is pivotal to managing the stock flow and reducing picking errors. In addition, the ability for your team to change shelf configurations quickly as stock volume and items change is important.

Bowen Stockroom's boltless shelving system was created to satisfy the needs of hand loaded storage requirements. The pigeonhole shelving not only provides a stable, strong and durable structure for your items but also gives the right-sized individual storage compartments through the ease and swiftness that shelves can be repositioned.

The shelving has adjustable height levels with galvanised finished shelves, allowing you to create taller or lower pigeonholes for your most popular or larger stock items in each section. In addition, the galvanised dividers easily slide to make the right-sized space for your SKUs ensuring no space is wasted.

With the galvanised finish, you ensure product durability and corrosion protection. In addition, shelving can be powder-coated in your brand colours.

This is the most versatile boltless Stockroom Shelving system with the greatest number of bay widths, lengths and heights compared to any other storage shelving system on the market.

A stockroom shelving system was developed to resolve challenges associated with storing light goods in both standard applications and two-tier configurations with heights ranging up to 5 metres.

It is a highly technical product that excels due to its speed of assembly, stability, and performance/cost ratio. Completely boltless, interchangeable, and extendable, a versatile stockroom shelving system satisfying the broadest needs of light storage requirements.

Constructed in galvanised 3.1 certified high tensile structural steel in accordance with the EN10204 standards ensuring the product's durability.

The frame system is composed of uprights, diagonal and horizontal spacer bars in varying depths and heights with load-bearing capacities ranging up to 3600 kg/frame.

With the steel strength, suspended walkway installations can be created with all the protection and safety elements required by current standards.

The standard shelving sizes that we hold in stock are:

- Heights – 1972mm, 2500mm, 3028mm, 3424mm;
- Depths – 320mm, 400mm, 500mm, 600mm, 700mm, 800mm;
- Lengths – 600mm, 900mm, 1080mm, 1200mm, 1350mm, 1500mm, 1650mm, 1800mm.

Fast Facts:

- Boltless shelving system;
- 33mm upright pitch;
- Excellent load-bearing capacity performance;
- Load capacity of up to 200kg per level;
- High-tech design;
- 90° corner units maximise storage
- Galvanised steel ensures durability over time
- Modular system available in many different dimensions;
- CE marked structural components.
